

WHAT'S  
NEW

# GRINDLINES

2008

FOURTH  
EDITION

## BUSINESS GROWTH & BUILDING EXPANSION

December 2007 saw the completion of a 12,800 sq. ft. addition, bringing our total up to 43,500 sq.ft.

The main bay of the new addition includes Flat Hone / Fine Grinder, Double-Sided Lap, Single Lap, Tumble Deburr and Parts Washer. The Quality Control Center was moved and expanded as well.

## ROTARY SURFACE GRINDING

Our newest machine has a surface grinding motion on a Rotary Base machine. We can also generate a concave or convex surface.

## 42" DOUBLE DISC GRINDER

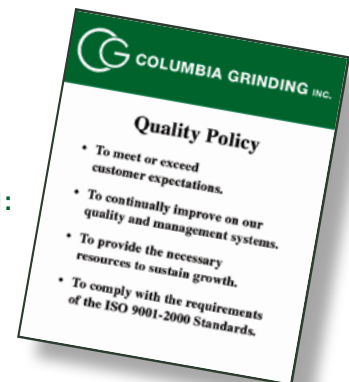

We now offer precision grinding for parts up to 20" in diameter. Our Paddle Type Disc Grinder has high horsepower so we can remove stock fairly effectively.

## FLAT HONING / PRECISION MACHINING

Higher precision, faster production rates and statistically consistent parts production with these "ultra-flat" machining services.

ISO 9001:  
2000
